

GAS DETECTION SYSTEMS

Industry Safety that Suits Your Needs

Otis Instruments gas detection products provide wired and wireless safety for toxic and combustible gases in a variety of environments and application types.

Our products are industry certified and can be integrated into new operations using battery-powered, wireless communication technology—saving time and money associated with setup and maintenance costs.

Affiliated telemetry options allow for remote monitoring and controls by authorized personnel whether they are on or off site.

Gas Detection Solutions

WIREFREE
SINCE 2005

Why Choose Otis?

Established in 1983, Otis Instruments has been an international force in gas detection for more than 35 years.

Decades of experience have provided the engineering leaders at Otis Instruments a foundation for building state-of-the-art gas detection products that are both rugged and reliable. Our products communicate seamlessly as a system, are suitable for harsh environments, and serve an array of industries that require detection and monitoring of gases to ensure premises safety.

WireFree Since 2005

OI-6900 **Sensor Assembly**

The WireFree OI-6900 Series Ambient Air Hazardous Gas Detector is a wireless, dual battery-powered assembly that uses an electrochemical or low-power infrared sensor element to detect a variety of toxic or combustible gases.

OI-7032 **Hybrid Monitor**

The OI-7032 is a 32-channel hybrid monitor and data logger that supports up to 32 WireFree sensor units, and up to four 4-20mA input sensors (when only 28 channels are setup as WireFree).

OI-7530 **Relayer**

The WireFree OI-7530 Relayer is a 32-channel, 3-relay/alarm system specifically designed for use in conjunction with the Otis Instruments Gen II WireFree Product Line.

OI-5950 **Transmitter**

The WireFree battery-powered OI-5950 receives and transmits switch-state signals from up to two individually addressable sensors in a new or existing WireFree system.
